Denis Gruszkiewicz

Junior Software Engineer | TypeScript, React, Node.js, SQL/PostgreSQL, Git

Wrocław, Poland | +48 511 592 887 | r3dflzp.ns@gmail.com | github.com/Flyingzaptop | antillia.tech | linkedin.com/in/denis-gruszkiewicz-70739b411

PROFILE

Student of Robotics and Process Automation (PWr) and IT systems (WSB Merito), with over a year as a Junior IT Administrator in a hospital. I build full-stack web applications on my own: LabFlow has a React 19 and TypeScript frontend with a Django REST Framework backend and PostgreSQL; JobHunter uses Node.js, PostgreSQL and Playwright. I use Git in all my projects and write tests (Vitest, pytest).

SELECTED PROJECTS

LabFlow | laboratory workflow application

github.com/Flyingzaptop/LabFlow

Django 5, DRF, React 19, TypeScript, PostgreSQL, Ollama, faster-whisper

- Full-stack app with versioned procedures, samples, process stages, role-based permissions, audit log, sessions, CSRF protection and request throttling.
- Optional local LLM chat (Ollama, streaming) and Polish speech-to-text; Windows and Ubuntu deployment (Gunicorn/Waitress, Caddy, systemd) with backup and restore guides. Public demo with fictional data; backend and Vitest tests.

JobHunter | job-search automation platform

github.com/Flyingzaptop/jobhunter-n8n

Node.js, n8n, PostgreSQL, Playwright, React, Ollama, Docker Compose, GitHub Actions

- Collects and analyses vacancies with n8n workflows, a PostgreSQL state store, schema-validated LLM extraction and browser automation, with human review. CI runs frontend, backend and Chromium regression tests; status partial, no unattended submissions.

Financial time-series ML | two years of self-directed research

github.com/Flyingzaptop/gc-mbo-research

Python, PyTorch, Polars, PyArrow, Rust (PyO3)

- Data pipelines, feature and label design, walk-forward validation and causality checks for event-level market data. Concluded NO_TRADE: a reusable evaluation toolkit, not a profitable strategy.

EXPERIENCE

Junior IT Administrator | ZOZ w Bolesławcu

06.2025 – present

- Day-to-day support for hospital staff: hardware, Windows, Microsoft 365 and application problems, workstation setup, LAN and switch connections.
- Reproduce reported errors and test application scenarios before changes go live.
- Part of the team that built an employee-management and scheduling system (shifts, duty swaps, leave); built and handed over.

SKILLS

Support	Windows, Microsoft 365 (strong), joining PCs to a domain, LAN, DHCP and routing basics, Linux basics
Development	Python (up to OOP), Django/DRF, React, TypeScript, Node.js, SQL, PostgreSQL, SQLite, Git, GitHub Actions
Automation and AI	n8n, Playwright, local LLMs (Ollama), schema-validated LLM output, PyTorch basics

EDUCATION

Wrocław University of Science and Technology

10.2022 – present

Higher education, engineering studies in progress: Robotics and Process Automation. Five of seven semesters completed.

WSB Merito University, Wrocław

03.2026 – present

Higher education, engineering studies in progress (part-time): network, systems and IT security. Second semester.

LANGUAGES AND AVAILABILITY

Languages	Polish and English advanced; Ukrainian and Russian native. Category B driving licence (3 years).
Availability	Start with 1 week notice. Flexible hours. From March 2027 onsite in Wrocław up to 1-2 days a week, remote the rest; part-time possible.
