PROFILE

Junior IT professional with over a year of hospital IT work in which I reproduce reported defects, test application scenarios and verify fixes. In personal projects I write automated tests (pytest, Node tests, Vitest, CTest) run in GitHub Actions CI. I have a two-year independent machine-learning project in Python/PyTorch, including checks for data leakage and unstable predictions, and I am interested in applying AI/ML to testing.

RELEVANT SKILLS

- User support: understanding reported issues, reproducing errors, explaining solutions and checking that fixes work.
- Testing: reproducing and verifying defects in hospital applications; automated tests in personal projects (pytest, Node tests, Vitest, CTest) run in GitHub Actions CI; Playwright browser automation.
- Python: data pipelines, scripts and automation up to object-oriented level; debugging, Git/GitHub, PostgreSQL/SQLite, basic SQL; IT Step Python AI course (2024).
- Machine learning: two-year independent ML project in Python/PyTorch (data collection, feature and target design, training, reinforcement-learning reward design, loss analysis); scikit-learn and Hugging Face Transformers in study notebooks.
- User support: understanding reported issues, reproducing errors, explaining solutions and checking that fixes work.
- LLM workflows: local LLM services (Ollama) with schema-validated outputs and human-in-the-loop checks in my own projects (JobHunter, LabFlow); AI-agent based automation with n8n.
- Automation and data: Python, n8n, PostgreSQL/SQLite, basic SQL; Git/GitHub and automated testing in personal projects.
- Windows and Microsoft 365: strong application familiarity and day-to-day user support; workstation setup and PC troubleshooting.

Junior IT Administrator | ZOZ w Bolesławcu | 06.2025 - present

- Provide day-to-day technical support to hospital staff and diagnose hardware, operating system and application issues.
- Configure workstations and network devices, connect switches and LAN cabling, and investigate connectivity problems.
- Analyse user needs, reproduce reported errors and test application scenarios and fixes.
- Develop internal tools for repetitive tasks; worked on separate employee-management, scheduling and laboratory-process applications.

SELECTED PROJECTS

JobHunter - workflow automation

Personal automation platform combining n8n, PostgreSQL, local LLM services, Playwright and a React dashboard. Worked with structured data, workflow validation, automated tests and GitHub Actions CI. This supports a systematic approach to investigating problems across connected services.

ARC - Adaptive Runtime Core | C++ / CMake / CTest

Personal experimental runtime project with automated regression tests and Windows/Linux CI builds (Debug/Release); used to investigate failures systematically.

LabFlow: Django/React laboratory workflow demo with user roles, validation and audit history; Windows/Ubuntu setup and recovery documentation.

EDUCATION

WSB Merito we Wrocławiu | 03.2026 - present

Network, systems and IT security engineering; part-time engineering studies, second semester.

Politechnika Wrocławska | 10.2022 - present

Robotics and Process Automation; engineering studies in progress, five semesters completed.

LANGUAGES AND AVAILABILITY

Polish - advanced; English - advanced / technical; Ukrainian and Russian - native. IT Step Python AI course, 02.2024 - 12.2024. Category B driving licence.

Seeking flexible working hours. From March 2027: available onsite in Wrocław up to 1–2 days per week, with remaining work remote. Open to part-time arrangements; start date by agreement.
